ecoBack

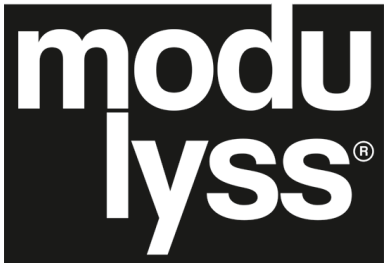

ecoBack

1. About

With ecoBack, we have launched a backing solution that is specifically designed to be recycled. This backing can help close the loop and contribute to the circular economy while also improving installer ergonomics.

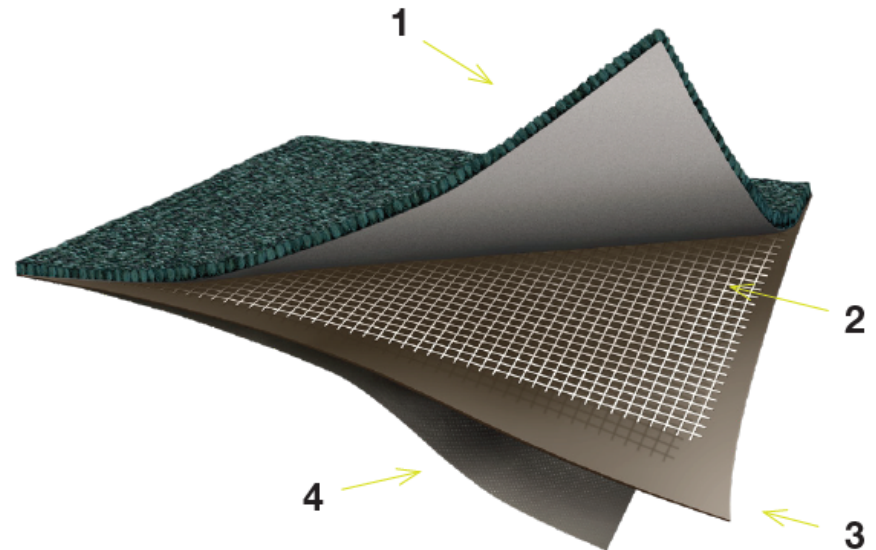

Here's how:

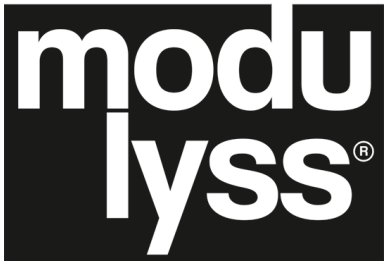

- ecoBack is **Cradle to Cradle Certified™ Gold**.
- It consists of a polyolefin-based layer with **min. 75% recycled content**.
- It's **100% PVC and bitumen free**.
- ecoBack makes for a more ergonomic and healthier installation. Thanks to its unique composition, flexibility and lower weight, it's **easier and less strenuous for installers** to cut and handle tiles with an ecoBack backing.
- ecoBack is **25% lighter** than other backings, but offers the same acoustical values and an even better dimensional stability.
- The lower weight of the backing results in (up to 16%) **less CO₂ and particulate matter emissions and fuel consumption** during the transport of the carpet tiles.
- After use, we can **recycle** ecoBack into a first grade new backing solution.

ecoBack Structure

1. Pile material + primary backing + precoat
2. Glass scrim for superior dimensional stability
3. Polyolefin-based layer with min. 75% recycled content
4. Secondary backing

ecoBack Conditions

ecoBack is the standard backing on our **Grind** minituft carpet tiles (this collection will only be available on ecoBack).

ecoBack is also available on **Millennium Nxtgen** without a minimum order quantity.

ecoBack can also be equipped on any other collection with:

- A minimum order quantity of 100 m²
- A surcharge applies
- Overages (same as comfortBack)
