## **GRIND**

**Light Reflectance Value (LRV)** is the total quantity of visible and usable light that is reflected by a surface (e.g. flooring, walls, furniture, ...) in all directions and at all wavelengths when illuminated by a light source.

LRV is a measurement that indicates how much light a surface **reflects**, and conversely how much it **absorbs**. LRV runs on a scale from 0% to 100%, 0% being a perfectly absorbing surface (black) up to 100% being a perfectly reflective surface (white). Additional to the colour of the surface, structure and gloss are factors that influence the light reflectance value.

The **L-value**, which is the colour depth, is used to calculate visual contrast. However this should not be mixed up with the LRV as the L-value is significantly higher. This is tested in accordance with the **EN ISO 11664-4** standard.

## LIGHT REFLECATNCE VALUES

| LRV | L                                |
|-----|----------------------------------|
| 31  | 63                               |
| 24  | 56                               |
| 14  | 44                               |
| 13  | 43                               |
| 12  | 42                               |
| 10  | 38                               |
| 15  | 46                               |
| 5   | 24                               |
|     | 31<br>24<br>14<br>13<br>12<br>10 |
